# How to explain code
(in English)

## Use these structures

Follow this when you're asked to walk through your code:
- **What does it do?**
- **Why it exists?**
- **How it works? (high level)**

## Useful phrases

| Situation | Example Phrase |
|-----------|----------------|
| Start | "This part handles…" |
| Flow | "Next, we…" / "Then it…" |
| Reason | "We do this to make sure…" |
| Clarify | "In short, it does…" |

💡 Mix and match for any situation

## Example

```
func SendResetEmail(userEmail
string) {
    token := generateToken(userEmail)
    storeTokenInDB(token, userEmail)
    emailBody :=
createResetEmail(token)
    sendEmail(userEmail, emailBody)
}
```

This function sends a password reset email.
It generates a token from the user's email, stores it in the DB, creates the email body, and sends it."

💡 Don't try to sound perfect, Sound clear
